

Welcome! This 3rd edition of the AI4DI Newsletter presents you with our project's progress and event highlights. The AI4DI Newsletter will be published until the end of the project. Through our project's website, Twitter and LinkedIn accounts, and this Newsletter, we will keep you informed about our project's results.

Events

AI4DI at EF ECS 2020

November 25th – 26th 2020, online conference

AI4DI partners presented the project in a virtual booth during the EF ECS 2020.

AI4DI virtual booth attracted visitors' attention with three project videos: video presenting artificial intelligence for mobility-as-a-service, smart robot recordings, and visualisations of the virtual environments. Furthermore, eight posters depicting the progress in different supply chains of the project were displayed, together with the general presentation of the AI4DI goals and the general poster.

EF ECS is the international forum with a focus on 'Our Digital Future' along the Electronic Components and Systems value chain in Europe. It is one of the most impactful events of the year, co-organised by AENEAS, ARTEMIS-IA, EPoSS, ECSEL Joint Undertaking and the European Commission, in association with EUREKA and supported by BMBF. The event was attended by over 900 representatives from the industry, academia, and policymaking domains.

AI4DI 1st Webinar

December 4th 2020, online webinar

AI4DI consortium partners were happy to invite all stakeholders to join the 1st Webinar of the AI4DI project. During the Webinar, AI4DI partners presented the topics of artificial intelligence for automotive manufacturing and mobility-as-a-service.

Presentations included topics of 'Automotive Industry Meets AI', Predictive Maintenance, Autonomous Reconfigurable Battery System, SME Perspective: Work Cycle Automation in Simulated Environments, and Learning and Training in Simulation.

Focusing on innovation and progress in automotive sectors, the event provided valuable insights on current technologies, and a glance into the future.
